

Disconnection Authorisation

Account number _____ Date _____

Name _____

*Should the property be owned by more than one owner, each owner **must** be included on this form*

Name _____

Name _____

Name _____

Address _____

I/we being the owner(s) authorise **Goldenfields Water County Council** to _____
disconnect the water supply at the above mentioned property. *Insert temporarily or permanent*

Temporary Disconnection

The property owner(s) continues at all times to be responsible for Access Charges as per GWCC's Operational Plan according to the actual service size per connection. (Access Charges are normally levied quarterly in arrears). And, at the time of reconnection the current Reconnection Fee will be payable. (For example 2023/24 Reconnection Fee is \$170.00).

Permanent Disconnection

Reconnection of a previously permanently disconnected water service connection is not guaranteed. No access charges will apply, however reconnection can expect to attract application and connection fees as per the GWCC's Operational Plan and Policies at the time of reconnection. For example 2023/24 Application Fee is \$330.00 and a Tapping Fee for a 20mm service is \$1,995.00. Additionally Developer Infrastructure Charges apply for any reconnection of a previously permanently disconnected water service connection.

The Charge shall be the lesser of;

- The Full Developer Infrastructure Charges or
- 120% of the current year's 20mm Access Charge (for that property's Goldenfields Water Classification), times the number of years of Permanent Disconnection.

A fee of \$170.00 for either temporary or permanent disconnection should be forwarded with this Authorisation. Payment of any outstanding amounts of this water account is also to be arranged.

The owners should be aware that the correct earthing (as per AS 3000 and 3008) of any electrical installation or appliance that may be connected to the internal water supply piping is operating correctly. The removal of the water meter will sever any physical link between your water supply and Council's water supply system. A licensed electrical person may be necessary to inspect the earthing, and verify that the installation will continue to comply with all relevant codes upon the removal of the water meter.

*This authorisation is to be signed by the owner, if the property is owned by more than one person, **each owner** is required to authorise the disconnection.*
